

PROVIDING ERROR RESILIENCE AND CONCEALMENT FOR

VIDEO DATA

Abstract of the Disclosure

An apparatus for providing error concealment, error resilience, and/or error resilience modification. The apparatus includes a first block to process a P-type frame in a video bitstream using a first error resilience technique. The apparatus further includes a second block to process a B-type frame in the video bitstream using a second error resilience technique that is different from the first error resilience technique.
